*For Immediate Release*

## Concerned About Data Security?

**Lake Zurich, IL** – We are. Recent regulations enacted around patient (HIPPA) and consumer (PCI) privacy, lead PrehKeyTec to introduce *SecurEntry* for our MCI family of keyboards. Why build Encryption into the application when you can encrypt the data in the keyboard before transmitting to the host. PrehKeyTec Engineers used advanced, processor-based keyboards to take data security to the next level. Now personal data is secured and encrypted before it ever leaves the keyboard.

Where does our technology apply? Encrypt MSR data within the confines of our keyboard before it is sent to the computer. Encrypt 'card not present' transactions by securing NUMPAD data inside of our keyboard. Transactions requiring proof of ID, like those often associated with Driver's license and Social Security numbers, can be encrypted. Corporate passwords, home addresses, diagnosis, etc., can be secure. Fingerprint data is protected in the most sensitive applications for secure log-on, access control, time and attendance, etc. When one Encryption method isn't enough, we provide any combination of Encryption amongst MSR, NUMPAD, Key Stroke, and Biometric input. Our keyboards adapt to your customer's ever changing business.

PrehKeyTec's Application Specific Keyboards (ASK) are ideal for use in a wide range of verticals from Healthcare to Government, Financial to Enterprise, Airlines to Customs, Retail, Grocery, and beyond.

### **About PrehKeyTec, Inc.**

PrehKeyTec is a leading manufacturer and supplier of point-of-sale and service data entry keyboards and touchscreens with an industry reputation for highly reliable products. PrehKeyTec solutions are installed in demanding operating conditions requiring high quality data entry systems. Applications include use in retail, grocery, banking and other operating environments that require dependable long-term performance, configuration flexibility and high reliability.
