

PCI Standards

We now offer two levels of credit card security on all PrehKeyTec keyboards.

Level One – Utilizes our standard, proprietary masking technique. Our special 'Key-Hook' allows the user to mask all MSR data preventing it from being hacked by an outside application.

Level Two – Our randomizing experts work with the ISV and end user to develop a unique encryption algorithm for their specific application.

Because PrehKeyTec keyboards have an internal processor and memory, all data coding is handled internally within the keyboard before the information is exported to the PC. Both levels of protection are backwards compatible to all previous generations of PrehKeyTec keyboards. Encryption techniques apply to all PrehKeyTec keyboards currently shipping with integrated MSR's including our new TouchKey keyboard.

Though PCI techniques don't cover keyboards, PrehKeyTec believes in the importance of protecting all sensitive data being transmitted by our products for our customers.

Save Space and Cash

PrehKeyTec's newest product, TouchKey, provides your customer with the ability to operate two or more units from a single host PC. This bold move allows price sensitive installs the flexibility of eliminating PCs to save money and space. Our hybrid TouchKey product combines both keyboard and touch screen in to a single unit providing a cost effective alternative for customers who want to utilize the features of both products but don't have the budget to procure the items as stand-alone pieces. Thanks to our superb design, a single USB interface cable

operates and powers both functions of TouchKey. Enjoy the added benefit of offering a greener solution to your

customers – integration of these items uses less energy than independent peripherals!

Consider TouchKey for your customers specializing in automating: Convenience, Grocery, Dollar

Stores, Home Centers, and more! Demo units are available for qualified accounts. Our technical experts will work with your customers to assist in programming the ideal solution for their application!
