

Look to PrehKeyTec for the Optimal Solution

Protected! Consider your customer's credit card data. Encrypt MSR Data within the confines of our keyboard before it is sent to the computer.

Secure! We Encrypt NUMPAD data inside of our keyboard. Ideal for "card not present" transactions often seen in retail. Transactions requiring proof of ID, like those often associated with Driver's license and Social Security numbers can also be encrypted.

Safe and Sound! Now corporate passwords, home addresses, diagnosis, etc., can be secure. We Encrypt Key Stroke data within our keyboard.

Locked Up Tight! Fingerprint data is protected in the most sensitive applications for secure log-on, access control, time and attendance, etc.

Sensitive Data! When one Encryption method isn't enough, we can work with you to provide any combination of Encryption amongst MSR, NUMPAD, Key Stroke, and Biometric input.

Our keyboards adapt to your customer's ever changing business. PrehKeyTec's Application Specific Keyboards (ASK) are ideal for use in a wide range of verticals from Healthcare to Government, Financial to Enterprise, Airlines to Customs, Retail, Grocery, and beyond.

Aggressive Environment

Our robust keyboards are designed to withstand "Heavy Fingers" and 30 Million key strokes, a metal base plate allows our keyboards to remain rigid in the most demanding environments.

Spills? Our Keyboards are protected against spills and dust!

Concerned about Data Security?

We are. Recent regulations enacted around patient (HIPPA) and consumer (PCI) privacy, lead PrehKeyTec to introduce *SecurEntry* for our MCI family of keyboards. Why build Encryption into the application when you can encrypt the data in the keyboard before transmitting to the host. PrehKeyTec Engineers used advanced, processor-based keyboards to take data security to the next level. Now personal data is secured and encrypted before it ever leaves the keyboard.

Securing all Data

Is your keyboard used to input secured Data? PrehKeyTec can help! We encrypt data received from the MSR or the alpha numeric section of the keyboard.

Complex Applications

PrehKeyTec's programmability makes even the most complex application seem simple! Our unique design allows the user to program more than 100 key strokes behind each key providing the operator the ability to drill down into an application with a single key stroke. This advanced programmability helps simplify operator training and enhances data input.
